« Nexus设备手动刷机步骤 在树莓派中部署MvSQL »

在树莓派中部署Nginx+PHP的方法

参考来源:点这里

### 1. 安装

```
sudo apt-get update
sudo apt-get install nginx
sudo service nginx start
sudo apt-get install php5-fpm php-apc
sudo service php5-fpm restart
```

### 2. 部署

默认安装的nginx在/etc/nginx目录下,部署的目录是sites-available和sites-enabled,其中前者是存放所有配置文件,通过软链接把需要的配置链进后者。默认安装nginx已经建好/var/www目录,只需要创建default的一副本并在上面修改即可,把php部分的注释去掉就可以了,这里php里选择php5-fpm项,完整的mysite文件如下:

```
server {
listen 80;
root /var/www;
index index.php index.htm;
location ~ \.php$ {
  include snippets/fastcgi-php.conf;
  fastcgi_pass unix:/var/run/php5-fpm.sock;
}
}
```

文件关联及重启服务的相关命令:

https://lordong.net/wp/post/1624.html

31713	上两 \$W. Lingth William High W. Coloding a blog
1	<pre>sudo unlink /etc/nginx/sites-enabled/default</pre>
2	<pre>cd /etc/nginx/sites-enabled</pre>
3	<pre>sudo ln -s/sites-available/mysite</pre>
4	sudo service nginx restart
5	sudo service php5-fpm restart
曾加ヌ	対图像函数imagecreate等的支持使用以下命令:

sudo apt-get install php5-gd sudo service php5-fpm restart
